# The Evolution4K<sup>™</sup> Recorder

**4K UHD** Medical Video Recorder Solution

The Med X Change, Inc. Evolution4K offers the latest in 4K UHD video recording in a compact device all while delivering brilliant 4K UHD video quality designed for both Apple and Windows editing. There are two available variations; the first with HDMI 2.0 50/60Hz input and HDMI 2.0 50/60Hz output (for 4K medical camera pass-through). The second variation has 4K quad SDI input and 4K quad SDI output, supporting both 4K Square Division and Two Sample Interleave (2SI). Both variations also accept 1080p HD resolution if a 4K medical camera is not connected.

As an embedded Linux device, the Evolution4K allows the users to enter patient data, capture 4K UHD video and 4K still images, playback 4K video, auto print to medical grade printers and record to dual USB 3.0 external hard drives or flash drives. The device is compliant to medical foot pedals (RS-232), 4K surgical microscope and 4K endoscope cameras (2x 3.5mm triggers), encrypts all ePHI data at rest and in transit and can store cases on a large internal hard-drive.

The device can be controlled via an integrated 12.7cm capacitive multi-touch screen that uses swipe and pinch and zoom gestures similar to the latest mobile devices.
